

```
function [xx,yy,zz] = earth_sphere(varargin)
%EARTH_SPHERE Generate an earth-sized sphere.
% [X,Y,Z] = EARTH_SPHERE(N) generates three (N+1)-by-(N+1)
% matrices so that SURFACE(X,Y,Z) produces a sphere equal to
% the radius of the earth in kilometers. The continents will be
% displayed.
%
% [X,Y,Z] = EARTH_SPHERE uses N = 50.
%
% EARTH_SPHERE(N) and just EARTH_SPHERE graph the earth as a
% SURFACE and do not return anything.
%
% EARTH_SPHERE(N,'mile') graphs the earth with miles as the unit rather
% than kilometers. Other valid inputs are 'ft' 'm' 'nm' 'miles' and 'AU'
% for feet, meters, nautical miles, miles, and astronomical units
% respectively.
%
% EARTH_SPHERE(AX,...) plots into AX instead of GCA.
%
% Examples:
%   earth_sphere('nm') produces an earth-sized sphere in nautical miles
%
%   earth_sphere(10,'AU') produces 10 point mesh of the Earth in
%   astronomical units
%
%   h1 = gca;
%   earth_sphere(h1,'mile')
%   hold on
%   plot3(x,y,z)
%   produces the Earth in miles on axis h1 and plots a trajectory from
%   variables x, y, and z
